## 8 Exposure controls / personal protection

### CONTROL PARAMETERS:

- **Ingredients with limit values that require monitoring at the workplace:**  
 The product does not contain any relevant quantities of materials with critical values that have to be monitored at the workplace.
- **Additional information:** By all means avoid entrance to the blood stream: LPS is a potent pyrogen causing fever already at low µg concentrations. Broken glass has the potential to be a health hazard if it is contaminated with LPS, which may enter the body through a cut or puncture.

### EXPOSURE CONTROLS:

- **General protective and hygienic measures:** The usual precautionary measures are to be adhered to when handling chemicals.
- **Respiratory protection:** Suitable respiratory protective device recommended.
- **Protection of hands:**  
 The glove material has to be impermeable and resistant to the product / the substance / the preparation.  
 Due to missing tests no recommendation to the glove material can be given for the product / the preparation / the chemical mixture. Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation.
- **Material of gloves:**  
 The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. Broken glass has the potential to be a health hazard if contaminated with LPS, which may enter the body through a cut or puncture.
- **Penetration time of glove material:** The break through time has to be found out by the manufacturer of the protective gloves.
- **Eye protection:** Goggles recommended during liquid handling.
